

About myself

I was working as a freelancer for two years. I mainly worked on the back-end part on Laravel and Yii2 there. Back-end is my strong side. After that, I got a job at "Qwintry.com". where I wanted to get new knowledge and worked for this company for almost 2 years. There, in addition to the back-end, I began to study Vue.js. I have 1.5 years of experience with Vue.js. Further, after I realized that I'm not growing in the company, I decided to get a job at "Anro Technologies". Engaged in back-end development of various applications (financial, educational projects).

At the moment I have been working at "**Nomadic Soft**" for several years. I am the main developer of the portal [Corcava](#) and lead developer of the **Sportsbook / HeroBet** platform — a sports betting and exchange system with an embeddable widget, back-office, and casino integration. Responsible for architecture and implementation across Laravel, Vue.js, and Angular projects, including data pipelines with Python and BigQuery ([Alkon](#)). Implemented new technologies and approaches — including AI-assisted development with Cursor and ChatGPT — that contributed to the optimization of development processes.

Experience

Full Stack Developer (Laravel)	Nomadic Soft	February 2023 - Current
Sportsbook (HeroBet) - Laravel 11, Vue 3, TypeScript, REST API, gRPC (ALPS, Lacerta EPT), Betfair Exchange API, embeddable betting widget, Redis, WebSocket, back-office (Vue, Vuetify), casino integration, anti-fraud, Cursor.
